

BACK FLOW PROTECTOR

BFP25 - BFP150 - BFP350

Primozone®
REDEFINING OZONE TECHNOLOGY

THE BEST INSURENCE.

Protect water from backflowing in to the generator.

EASY TO INSTALL

Plug & Play

MAINTENANCE FREE.
General safety inspection.

**MODERN.
INTELLIGENT.
FAST RESPONSE.**

PROTECTION.

Protecting your ozone equipment from back flowing water is a cost-effective and straightforward way of ensuring up-time and problem-free operations of an ozone installation.

ELETRICAL WATER DETECTION.

Accidental backflow of water that enters an ozone generator may cause significant damage to the ozone reactors and power supplies and consequently result in downtime and significant costs. Thanks to its electrical detection system the Primozone BFP has a swift response time and is very reliable. At 3 bars working pressure, it is guaranteed to shut-off immediately upon detection of water.

AUTOMATIC SYSTEM SHUT-OFF

The Primozone BFP is designed to be wholly integrated with any ozone solution. This thanks to its capacity to be enabled either via the ozone generator or a control system and its ability to shut off the complete system automatically when being triggered.

EASY MAINTENANCE & RESTART

The Primozone BFP is designed for minimum maintenance and safe operations; it includes built-in drainage for quick restart after being triggered.

EXTREMELY FAST RESPONSE TIME

FITS ANY OZONE INSTALLATION

BUILT IN DRAINAGE
